

How to configure tcp/IP on Mac OS 9

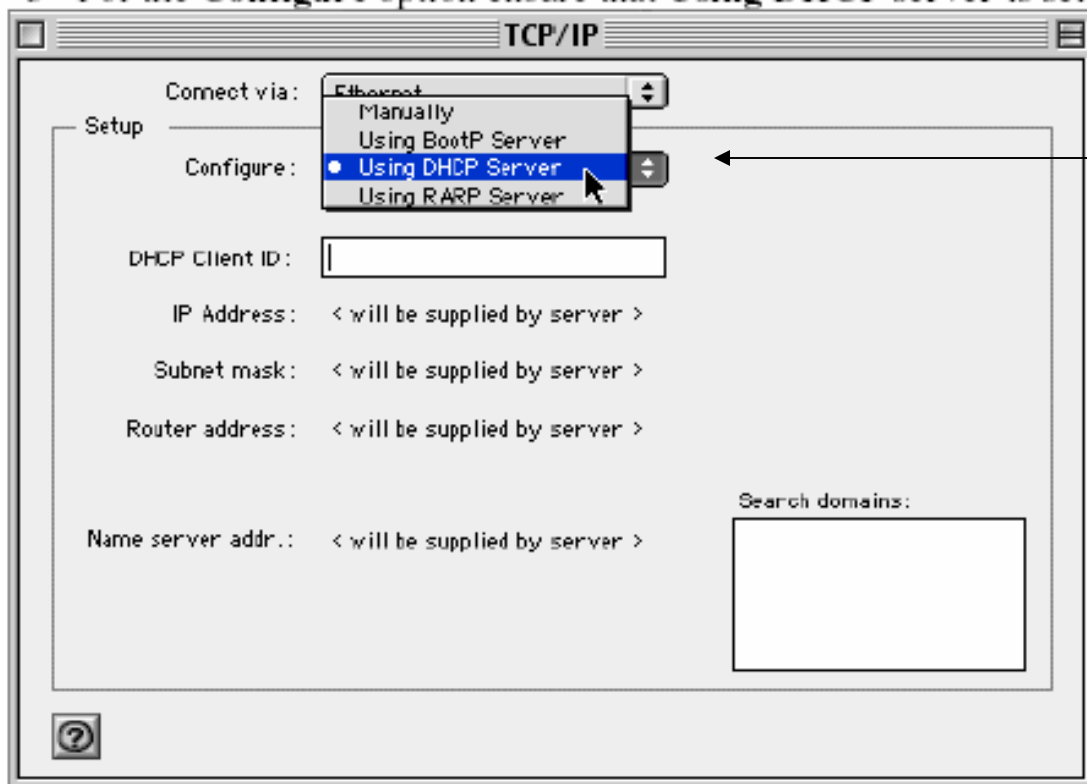

- 1 Select **Control Panel** ▶ **TCP/IP** from the **Apple Menu**.

2 For the **Connect via** option ensure that the **Ethernet** option is selected.

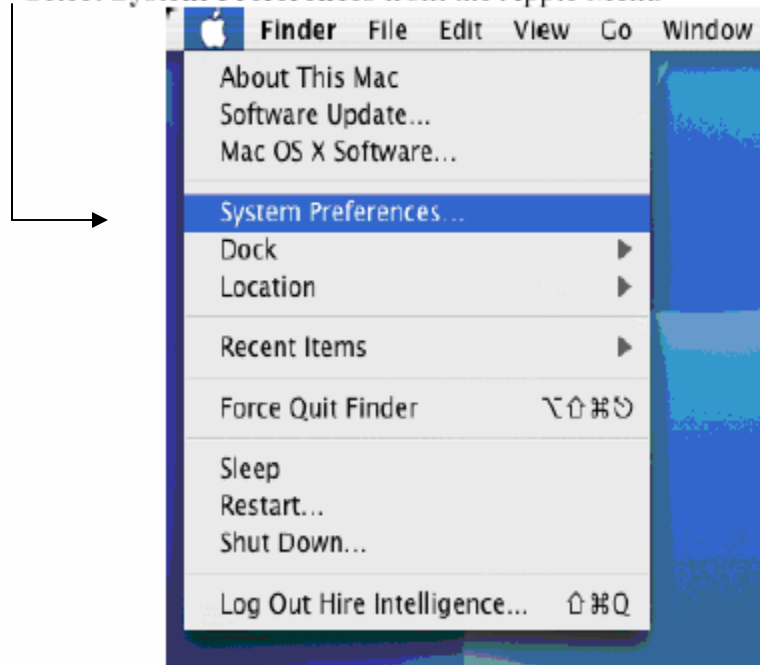

3 For the **Configure** option ensure that **Using DHCP server** is selected.

How to configure tcp/IP Mac OS X

- 1 Select **System Preferences** from the Apple Menu

- 2 Double click the **Network** icon.

- 3 Make sure that the **Built-in Ethernet** option is selected in the **Show** menu. You can either configure the **Automatic** location or create a new location. Ensure that **Using DHCP** is selected for the **Configure IPv4** option.
